

Towards a European network of FAIR-enabling Trustworthy Digital Repositories.

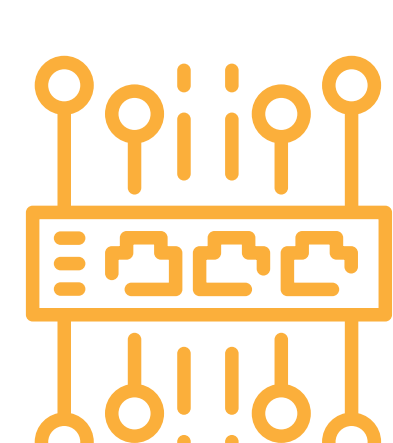

Main goals

-  Establish, develop, and operate a European network of trustworthy digital repositories within the EOSC ecosystem
-  Enable harmonisation, interoperability and long-term access across repositories, to strengthen federation of TDRs within EOSC
-  Upskill of Trustworthy Digital Repositories [within the network] and expansion of the network through training, support and mentoring programmes

Who is FIDELIS for?

European repositories at different levels of capability

Research & Infrastructures

Certification bodies

Funding agencies

Technical repository service providers

Policymakers

Main impacts

Strengthened FAIR Capabilities and Trustworthiness

Improved the repositories' ability to support FAIR principles via training, peer-support and financial aid. Essential TDR Characteristics defined through the Transparent Trustworthy Repository Attributes Matrix (TTRAM)

Establishment of the European Network of TDRs

European cross-disciplinary Trustworthy Digital Repositories engaged in a network to provide a common voice and collective support to TDRs.

Interoperability across Repositories

Recommended common standards and practices among repositories. Focus will be on harmonising definitions, metadata standards, and APIs to enhance discoverability and federated services across repositories.
